ePDF-version: ISBN 978-3-8374-5519-9, Euro 29,80

Ascites is by far the most frequent complication that occurs in patients with cirrhosis and it is associated with poor outcome. Therefore, accurate diagnosis and optimal treatment are essential in the management of this condition.

This book provides immediate and easy-to-read information about ascites in cirrhotic patients, including epidemiology, pathophysiology, pharmacology and nutritional issues, as well as an overview on current and future treatment options.

A must have for students, trainees and practitioners who want to deepen their knowledge in this complex field.
